

DEMOLITION

SHAPING TOMORROW.

SERVICES

We rely on more than 40 years of experience and our triple certified integrated QSE management systems to maintain an unparalleled record in a safety critical environment. Our demolition teams call upon a portfolio of work that includes some of Australia's most recognised landmarks and toughest engineering challenges to deliver unrivalled expertise in all facets of commercial and industrial deconstruction.

+ Commercial

Demolition of commercial office and residential structures as well as public infrastructure, including structural modifications, strip outs and heritage works that involve the partial demolition of buildings to retain protected areas or building facades. Deconstruction of retail malls, hospitals, academic and high density mixed-use precincts involving strict traffic management, emissions, noise and vibration controls to ensure that residential amenity and commercial trading operations remain uninterrupted.

+ Industrial

Large scale industrial deconstruction and decommissioning, including mine sites, bulk port and storage facilities, power stations, refineries, oil and gas rigs, quarries or mills. High risk structural demolition involving 'live' operations, engineering studies, simulated modelling techniques and complex heavy lift solutions to dismantle stackers, conveyors, chimney stacks, silos, and tower structures. Highly specialised marine based deconstruction services on or above the water.

+ Recycling

Delta Group diverts more than 4m tonnes of construction waste from landfill every year with over 90% recycled and reused as 21st Century building materials on project sites around the world. We can design and deliver turnkey waste management solutions to satisfy commercial and industrial project needs, including materials tracking management and reporting systems and a fleet of licensed transport vehicles and specialist crushing, screening and recycling plant.

+ Asset Recovery & Salvage

Commercial and industrial plant decommissioning and dismantling, including materials separation, plant or equipment reuse/resale, and disaster or emergency response operations.

+ Commercial Bin Hire

Our customised batch-processing and collection services coordinate the movement of licensed waste transport operations, including 6-32 cubic metre Hook and Craneable Skip Bins for residential and commercial projects as well as high rise construction and demolition works.

+ Closure Studies

Detailed Closure Studies and Plans, including Preliminary and Definitive Feasibility Studies as well as closure cost updates and comparisons, simulations and safe work method evaluations.

+ Plant & Equipment

Delta Group operates the largest fleet of specialised plant and equipment in Australia. It is purpose-built for demolition projects and regularly upgraded to ensure we capitalise on late model machinery and the efficiencies they bring to a demolition works programme. The fleet is meticulously maintained and our transport logistical systems allow us to manage plant and equipment movements across hundreds of projects at any one time.

We have an in-house fabrication workshop to custom design precision attachments and our capacity to deploy capital expenditure for new plant and equipment gives us the flexibility to meet any client or project requirement.

+ People

We refuse to accept anything but the very best we can give to a client and their project. We are fiercely proud of our success but we won't rest on our laurels. Nor will we get ahead of ourselves because our willingness to learn and improve is our trademark. It's why we've forged a reputation as a pioneer and trusted standard bearer of unparalleled safety, integrity, teamwork and excellence.
